

A to B

After campus activities are finished, Lili will immediately go home to play. But in the middle of the road, Lili imagines an interesting problem where Lili has a starting number at A and ending number B. Lili wants to know whether she can change A into B if Lili can apply following operations toward A.

- If A=1, then A=A.
- If A is even, then A = A/2.
- If A is odd, then A = A * 3 + 1.

Note: Lili can do the above operations as much as possible.

Format Input

There are T test cases. Each testcase contains integers A and B which indicate the starting number and the ending number.

Format Output

Output T line with format "Case #X:", where X represents the testcase number (starting from 1), then followed by "YES" if Lili can change A so that the value of A equals B, or "NO" if she cannot.

Constraints

- 1 < T < 100
- $1 \le A, B \le 10000$

Sample Input (standard input)

3 2 1

5 6

12 5

Any other reproduction in any form without the permission of School of Computer Science - BINUS is probibited. Violators of this clause may be academically sanctioned.

Sample Output (standard output)

Case #1: YES
Case #2: NO
Case #3: YES

Explanation

In case 1, A will change from 2 = > 1.

In case 2, A will change from $5 \Rightarrow 16 \Rightarrow 8 \Rightarrow 4 \Rightarrow 2 \Rightarrow 1 \Rightarrow 1 \Rightarrow 1 \Rightarrow 1 \Rightarrow 1$

=> ..., so the value of A will never be the same as the value B. In case 3, A will change from 12 => 6 => 3 => 10 => 5.

A to B

Setelah aktivitas kampus selesai, Lili segera pulang ke rumah untuk bermain. Namun dipertengahan jalan, Lili terbayang akan suatu permasalahan yang menarik dimana Lili mempunyai suatu angka mulai A dan angka akhir B. Lili ingin mengetahui apakah suatu saat A akan sama dengan B apabila Lili dapat melakukan operasi berikut terdapat A.

- Jika A = 1, maka A = A.
- Jika A genap, maka A = A/2.
- Jika A ganjil, maka A = A * 3 + 1.

Note: Lili dapat melakukan operasi diatas sebanyak mungkin.

Format Input

Terdapat T buah testcase. Setiap testcase berisi bilangan bulat A dan B yang menandakan angka awal dan angka akhir.

Format Output

Keluarkan T baris dengan format "Case #X:", dimana X menandakan nomor testcase (mulai dari 1), kemudian diikuti "YES" jika Lili dapat mengubah A agar nilai A sama dengan B, atau "NO" jika tidak bisa.

Constraints

- 1 < T < 100
- $1 \le A, B \le 10000$

Sample Input (standard input)

3 2 1

5 6

12 5

Sample Output (standard output)

Case #1: YES
Case #2: NO
Case #3: YES

Explanation

Pada kasus 1, A akan berubah dari $2 \Rightarrow 1$.

Pada kasus 2, A akan berubah dari 5 => 16 => 8 => 4 => 2 => 1 => 1 => 1

=>1=>..., sehingga nilai A tidak akan pernah sama dengan nilai B.

Pada kasus 3, A akan berubah dari $12 \Rightarrow 6 \Rightarrow 3 \Rightarrow 10 \Rightarrow 5$.
