

# Desperate Horse

Lili was playing chess with Jojo. Then, Jojo gave Lili a challenge, which was to find out the minimum steps required by a Knight from  $(x_1, y_1)$  to  $(x_2, y_2)$ .

Help Lili find out the minimum steps of the knight to reach  $(x_2, y_2)$  from  $(x_1, y_1)$ .

You are encouraged to use recursive techniques to solve this problem.

## Format Input

Input consists of 1 integer T indicating number of testcase and followed by T row after. For each test case contains  $(x_1, y_1)$  and  $(x_1, y_1)$ , the start point and the final point (coordinates). The coordinates will be expressed in letter and number form (e.g. A5, A2, C1).

## Format Output

Output should be expressed in format "Case #X: Y" - X is number of testcase (starting from 1) and Y is the minimum steps needed to get to the destination.

### Constraints

- $1 \le T \le 10$
- $A \leq x_1, x_2 \leq H$
- $1 \le y_1, y_2 \le 8$

### Sample Input (standard input)

2	
A7 E7	
A1 B3	

### Sample Output (standard output)

Case #1: 2 Case #2: 1

### Explanation

On case 1, the knight can move to the red tile with 1 step, and can go easily to the yellow tile only in 1 final step. Thus, the minimum number of steps needed is 2.

### Hint

From all possible start point to all possible final point, knight only requires at most 6 minimum steps.

## Desperate Horse

Lili sedang bermain catur dengan Jojo. Kemudian Jojo memberi tantangan kepada Lili, yaitu untuk mencari tahu langkah minimum yang dibutuhkan oleh suatu kuda dari  $(x_1, y_1)$  ke  $(x_2, y_2)$ .

Bantulah Lili dalam mencari tahu berapa langkah minimum kuda untuk menuju ke  $(x_2, y_2)$  dari  $(x_1, y_1)$ .

Anda disarankan untuk menggunakan teknik rekursif untuk menyelesaikan masalah ini.

### Format Input

Input terdiri dari 1 buah angka bulat T yang menyatakan jumlah testcase dan diikuti oleh T baris. Pada tiap kasus, terdiri dari dua buah koordinat  $(x_1, y_1)$  dan  $(x_2, y_2)$ , koordinat dari kuda dan koordinat tujuan kuda tersebut. Koordinat akan dinyatakan dalam huruf dan angka (contoh: A5, A2, C1).

## Format Output

Output yang dikeluarkan dalam format "Case # X: Y" - X merupakan nomor testcase (mulai dari 1) dan Y merupakan langkah minimal yang dibutuhkan untuk sampai ke tujuan.

### Constraints

- 1 < T < 10
- $A \leq x_1, x_2 \leq H$
- $1 \le y_1, y_2 \le 8$

## Sample Input (standard input)

2 A7 E7 A1 B3

### Sample Output (standard output)

Case #1: 2 Case #2: 1

### Explanation

Pada kasus pertama, kuda dapat bergerak ke kotak yang berwarna merah dengan 1 langkah, berikutnya dapat bergerak ke tujuan akhir. Sehingga jumlah langkah minimal yang dibutuhkan adalah 2.

### Hint

Dari semua kemungkinan titik awal ke titik akhir, kuda hanya membutuhkan paling banyak 6 langkah minimum.
